# Maintenance Management Order

**SUBJECT:** Update Preventive, Predictive, and Operational  
Maintenance Guidelines for Delivery Input  
Output Sub-System (DIOSS) AF Using eCBM

**DATE:** December 3, 2012

**NO:** MMO-140-12

**TO:** All DIOSS AF Offices

**FILE CODE:** D8F

wbro: mm11135ad

Online Change Record		
Change #	Date	Description of Change
2	05/22/2020	Added the Infrared Thermography information after the online change record.
1	03/07/2019	Online Change 1 replaces the summaries in Attachment 1 with corrected numbers.

Infrared Thermography Information for DBCS Based Sorting Equipment – Plug and Receptacle Connectors is located at **MTSC>HELPDESK>Service Portal>Knowledge Base>KB0013384**.

This Maintenance Management Order (MMO) provides an updated Preventive, Predictive, and Operational Maintenance Guidelines for the Delivery Input Output Sub-System (DIOSS - E) and supersedes MMO-044-10.

The workhours indicated in the workload estimate (Attachment 1) reflect the *maximum* annual workhours required to maintain each system. Actual workhour requirements and the frequency of tasks are dependent on pieces processed. Therefore, PM workhour requirements will vary day-to-day based on site specific machine utilization. Management may modify task frequencies to address local conditions.

The minimum maintenance skill level required to perform each task is included in the Minimum Skill Level column of each checklist. This does not preclude higher level employees from performing any of this work.

Preventive Maintenance (PM) guidelines provide maintenance employees with the recommended task based maintenance activities. The Electronic Conditioned Based Maintenance (eCBM) is an abbreviated task list that represents a portion of the PM checklist. The complete master PM checklist must be accessible to all maintenance employees when performing PM and eCBM task based maintenance activities.

**WARNING**

Various products requiring Material Safety Data Sheets (MSDS) may be utilized during the performance of the procedures in this bulletin. Ensure the current MSDS for each product used is on file and available to all employees. When reordering such a product, it is suggested that current MSDS be requested. Refer to MSDS for appropriate personal protective equipment.

**WARNING**

Steps contained in this bulletin may require the use of Personal Protective Equipment (PPE). Refer to the current Electrical Work Plan (EWP) MMO for appropriate PPE requirements.

**WARNING**

The use of compressed or blown air is prohibited. An alternative cleaning method such as a HEPA filtered vacuum cleaner, a damp rag, lint-free cloth, or brush must be used in place of compressed or blown air.

For questions or comments concerning this bulletin contact the MTSC HelpDesk, either online at **MTSC>HELPDESK>Create/Update Tickets** or call (800) 366-4123.

A handwritten signature in black ink, appearing to read 'Robert E. Albert', with a stylized flourish extending from the end.

SAFETY STATEMENT	1.	<p><b>COMPLY WITH ALL SAFETY PRECAUTIONS.</b>            Disconnect power and apply lockouts when required by this instruction. Refer to current local lockout procedures to properly shutdown and lockout this machine. Open equipment and inspect dust conditions. Check for suspicious dust or unusual debris. If any unusual substance is found notify supervisor prior to proceeding with any further action on the equipment.</p> <p><b>THE USE OF COMPRESSED OR BLOWN AIR IS PROHIBITED.</b>            When cleaning is required, an alternative cleaning method such as a HEPA filtered vacuum cleaner or a damp rag must be used in place of compressed or blown air. A lint-free cloth or brush may be used on optical equipment only when other cleaning methods cannot be used. Report safety deficiencies to your supervisor immediately upon detection.</p> <p><b>WARNING FOR EWP/PPE:</b>            Steps contained in this bulletin may require the use of Personal Protective Equipment (PPE). Refer to the current Electrical Work Plan (EWP) MMO for appropriate PPE requirements.</p>	1	All			
DIOSS SYSTEM: REPORT ANALYSIS	2.	<p><b>Generate, print, or view End of Day and Tracking Report.</b></p> <p>Prior to performing the power down lockout procedures, analyze data provided on these reports to determine if any areas of machine are degraded or in need of attention.</p>	4	10		1	
DIOSS SYSTEM SHUTDOWN PRINTERS AND COMPUTERS	3.	<p><b>Shut down the DIOSS - E System in accordance with the procedures in the most recent documentation.</b></p> <p>As of the date of this writing for detailed steps to properly shut down the DIOSS – E system refer to MS Handbook MS-250, Volume B, Section 5.3.</p> <p style="text-align: center;"><b>NOTE</b></p> <p>If any problems are encountered while performing these procedures report them to your supervisor.</p>	12	9		1

PRINTER  
MODULE: ID TAG  
PRIMARY AND  
INPUT AIR FILTER

**and input air filter:**

1. Replace the primary ink filter.

**NOTE**

Refer to Videojet Universal Series 37PC service manual for part number and for illustrations related to replacing filters.

**NOTE**

Compressed air is shut off when electrical power is locked out.

- a. Verify there is no compressed air to printer.
- b. Open printer front door.

**WARNING**

**When disposing of ink or ink saturated waste, refer to procedures outlined in current Material Safety Data Sheets (MSDS).**

- c. Place absorbent towels below ink module to catch any ink that may spill when removing primary ink filter.
  - d. Remove fitting from bottom of primary ink filter by turning with a 7/16 inch wrench.
  - e. Unscrew primary ink filter from bottom of ink module.
  - f. Wipe excess ink from bottom of ink module mounting hole with absorbent towels and cleaning solution.
  - g. Discard old primary ink filter.
  - h. Install new primary ink filter into bottom of ink module finger tight. Do not over tighten. Hand-tighten only.
  - i. Install fitting into bottom of primary ink filter.
2. Replace ID tag bar code printer input air filter.

**NOTE**

Refer to Videojet Universal Series 37PC service manual for part number and for

SAFETY STATEMENT	1.	<p><b>COMPLY WITH ALL SAFETY PRECAUTIONS.</b> Disconnect power and apply lockouts when required by this instruction. Refer to current local lockout procedures to properly shutdown and lockout this machine. Open equipment and inspect dust conditions. Check for suspicious dust or unusual debris. If any unusual substance is found notify supervisor prior to proceeding with any further action on the equipment.</p> <p><b>THE USE OF COMPRESSED OR BLOWN AIR IS PROHIBITED.</b> When cleaning is required, an alternative cleaning method such as a HEPA filtered vacuum cleaner or a damp rag must be used in place of compressed or blown air. A lint-free cloth or brush may be used on optical equipment only when other cleaning methods cannot be used. Report safety deficiencies to your supervisor immediately upon detection.</p> <p><b>WARNING FOR EWP/PPE:</b> Steps contained in this bulletin may require the use of Personal Protective Equipment (PPE). Refer to the current Electrical Work Plan (EWP) MMO for appropriate PPE requirements.</p>	1	All			
	2.	<p><b>At the beginning of the operation, examine machine log.</b></p> <div style="border: 1px solid black; padding: 5px; text-align: center; margin: 10px 0;"><b>WARNING</b></div> <p>Be cautious when working around or on equipment when power has been applied. This task requires that the machine be running. Take precautions to prevent hair, clothing, jewelry, tools, and test equipment from being caught in moving parts.</p> <p style="text-align: center;"><b>NOTE</b></p> <p>While performing listed operational maintenance tasks, be alert for unusual sounds, odors, or other indications of potential failure conditions in the machine.</p>	1	9			T

DIOSS OPM: ICS READERS	7.	<b>Every two hours check for dirt accumulations.</b>  1. Check ICS-3 ID tag reader's exterior for accumulated dust, dirt and debris or loose/worn belts, paying particular attention to the aperture and to the raised portion of the faceplate.  2. Document any problems found, and if needed write a work order.	2	9			T
DIOSS OPM: POSTNET IJP	8.	<b>Every two hours check for dirt/ink accumulations.</b>  Check POSTNET ink jet printer to ensure there is no build-up of foreign material or accumulation of ink at print head. Clean as necessary.	2	9			T
DIOSS OPM: ID TAG IJP	9.	<b>Every two hours check for dirt/ink accumulations.</b>  Check ID Tag ink jet printer to ensure there is no build-up of foreign material or accumulation of ink at print head. Clean as necessary.	2	9			T
DIOSS OPM: REJECT STACKER(S)	10.	<b>Every two hours check bar code printing.</b>  Check for print quality of POSTNET and ID Tag bar codes as well as quality of address in the address block. Are bar codes smudged or out of tolerance? Correct problems as noted.	1	9			T
DIOSS OPM: SORTING STACKERS	11.	<b>Every two hours check for missorts.</b>  Take a sample from at least 5 stackers and verify the address block matches the scheme for that pocket. Verify mail pieces enter stacker in a uniform manner. Document any problems found and if needed write a work order.	2	9			T
DIOSS OPM: OVERFLOW STACKER	12.	<b>Every two hours check mail in the Overflow/Reject Stacker.</b>  Check type of mail present in overflow stacker to determine which area(s) of the machine might be malfunctioning. Check for indications of double feeds, one particular code, a single gate, or mail path blockage problem. Document any problems found, and if needed write a work order.	2	9			T
