Maintenance Guidelines for Delivery Input
Output Sub-System (DIOSS) AC Using eCBM

TO: All DIOSS AC Offices

DATE: August 8, 2016

NO: MMO-126-16

FILE CODE: D8C

dgue: mm13090af

	Online Change Record											
Change #	Date	Description of Change										
1	05/12/2017	Item 25 changed to read: LEVELER MODULE: POSTNET										
		IJP VACUUM FILTER										
2	10/26/2017	Made online chg 2. Updated item13.										
3	05/22/2020	Added the Infrared Thermography information after the online										
		change record.										
4	11/08/2022	Attachment 2, Item No 39, added a Note and edited Step 2.										

Infrared Thermography Information for DBCS Based Sorting Equipment – Plug and Receptacle Connectors is located at MTSC>HELPDESK>Service Portal>Knowledge Base>KB0013384.

This Maintenance Management Order (MMO) provides Preventive, Predictive, and Operational Maintenance Guidelines for the Delivery Input Output Sub-System (DIOSS - B), and supersedes MMO-047-08 and MMO-111-09.

The workhours indicated in the workload estimate (Attachment 1) reflect the *maximum* annual workhours required to maintain each system. Actual workhour requirements and the frequency of tasks are dependent on pieces processed. Therefore, PM workhour requirements will vary day-to-day based on site specific machine utilization. Management may modify task frequencies to address local conditions.

The minimum maintenance skill level required to perform each task is included in the Minimum Skill Level column of each checklist. This does not preclude higher level employees from performing any of this work.

Preventive Maintenance (PM) guidelines provide maintenance employees with the recommended task based maintenance activities. The Electronic Conditioned Based Maintenance (eCBM) is an abbreviated task list that represents a portion of the PM checklist. The complete master PM checklist must be accessible to all maintenance employees when performing PM and eCBM task based maintenance activities.

Web Access: http://mtsc.usps.gov/

WARNING

Various products requiring Safety Data Sheets (SDS) may be utilized during the performance of the procedures in this bulletin. Ensure the current SDS for each product used is on file and available to all employees. When reordering such a product, it is suggested that current SDS be requested. Refer to SDS for appropriate personal protective equipment.

WARNING

Steps contained in this bulletin may require the use of Electrical Work Plan (EWP) Personal Protective Equipment (PPE). Refer to the current EWP MMO for appropriate EWP PPE and barricade requirements.

WARNING

The use of compressed or blown air is prohibited. An alternative cleaning method such as a HEPA filtered vacuum cleaner, a damp rag, lint-free cloth, or brush must be used in place of compressed or blown air.

Direct any questions or comments concerning this bulletin to the MTSC HelpDesk, online at https://tickets.mtsc.usps.gov/login.php or call (800) 366-4123 or (405) 573-2123.

AFETY TATEMENT		COMPLY WITH ALL SAFETY PRECAUTIONS. Disconnect power and apply lockouts when required by this instruction. Refer to current local lockout procedures to properly shut down and lock out this machine. Open equipment and inspect dust conditions. Check for suspicious dust or unusual debris. If any unusual substance is found notify supervisor prior to proceeding with any further action on the equipment. THE USE OF COMPRESSED OR BLOWN AIR	4	All			

When cleaning is required, an alternative cleaning method such as a HEPA filtered vacuum cleaner or a damp rag must be used in place of compressed or blown air. A lintfree cloth or brush may be used on optical equipment only when other cleaning methods cannot be used. Report safety deficiencies to your supervisor immediately upon detection. WARNING FOR EWP/PPE: Steps contained in this bulletin may require the use of Electrical Work Plan (EWP) Personal Protective Equipment (PPE). Refer to the current EWP MMO for appropriate EWP PPE and barricade requirements. DIOSS SYSTEM: 2. Generate, print, or view End of Day and 10 REPORT Tracking Report. **ANALYSIS** Prior to performing the power down lockout procedures, analyze data provided on these reports to determine if any areas of machine are degraded or in need of attention. **DIOSS SYSTEM** Shut down the DIOSS - B System in 9 3. 12 accordance with the procedures in the most SHUTDOWN PRINTERS AND recent documentation. **COMPUTERS** As of the date of this writing for detailed steps to properly shut down the DIOSS – B system refer to MS Handbook MS-251, Volume B, Section 5.3. NOTE

2 Attachment 2

If any problems are encountered while performing these procedures report them

to your supervisor.

SAFETY STATEMENT		COMPLY WITH ALL SAFETY PRECAUTIONS. Disconnect power and apply lockouts when required by this instruction. Refer to current local lockout procedures to properly shut down and lock out this machine. Open equipment and inspect dust conditions. Check for suspicious dust or unusual debris. If any unusual substance is found notify supervisor prior to proceeding with any further action on the equipment.	1	All			
		THE USE OF COMPRESSED OR BLOWN AIR IS PROHIBITED. When cleaning is required, an alternative cleaning method such as a HEPA filtered vacuum cleaner or a damp rag must be used in place of compressed or blown air. A lint-free cloth or brush may be used on optical equipment only when other cleaning methods cannot be used. Report safety deficiencies to your supervisor immediately upon detection.					
		WARNING FOR EWP/PPE: Steps contained in this bulletin may require the use of Personal Protective Equipment (PPE). Refer to the current Electrical Work Plan (EWP) MMO for appropriate PPE requirements.					
DIOSS OPM: MACHINE LOG BOOK		At the beginning of the operation, examine machine log. WARNING Be cautious when working around or on equipment when power has been applied. This task requires that the machine be running. Take precautions to prevent hair, clothing, jewelry, tools, and test equipment from being caught in moving parts. NOTE While performing listed operational maintenance tasks, be alert for unusual sounds, odors, or other indications of potential failure conditions in the machine.	1	9			T

DIOSS OPM:	3.	operating mode. Every two hours check warning horn and	1	9			Т		
SAFETY INDICATORS		beacons. Check for proper operation of warning horns and beacons on start-ups.							
DIOSS OPM: SYSTEM INDICATORS	4.	Every two hours check lamps. Watch for proper functionality of all indicator lamps used during normal machine operations. Correct deficiencies as soon as practical.	1	9			Т		
DIOSS OPM: OPERATORS	5.	Every two hours observe Feeder and check with operator. Observe the Feeder operation and inquire if operators are having excessive processing problems. Investigate as necessary. Initiate corrective action as appropriate.	1	9			Т		
DIOSS OPM: VIDEO DISPLAY TERMINAL WFOV	6.	Every two hours check mail processing screen. 1. Check current Accept Rate Value on the GUI to ensure the sort plan, operating mode, and Accept Rate is correct for the mail being processed in accordance with the following: a. Operation 918 and 919 - 99.1% GAR b. All other Operations 98.8% GAR 2. If MAR or GAR is below acceptable values: a. Check for degraded image and/or dust/debris accumulations on WFOV faceplate by observing the thumbnail image on the upper left on the GUI. b. If the image is degraded or if problems are noted take appropriate corrective action.	1	9			Т

DIOSS OPM: ICS READERS	7.	 Check ICS-3 ID tag reader's exterior for accumulated dust, dirt and debris or loose/worn belts, paying particular attention to the aperture and to the raised portion of the faceplate. Document any problems found, and if needed write a work order. 	2	9			Т		
DIOSS OPM: POSTNET IJP	8.	Every two hours check for dirt/ink accumulations. Check POSTNET ink jet printer to ensure there is no build-up of foreign material or accumulation of ink at print head. Clean as necessary.	2	9			T		
DIOSS OPM: ID TAG IJP	9.	Every two hours check for dirt/ink accumulations. Check ID Tag ink jet printer to ensure there is no build-up of foreign material or accumulation of ink at print head. Clean as necessary.	2	9			Т		
DIOSS OPM: REJECT STACKER(S)	10.	Every two hours check bar code printing. Check for print quality of POSTNET and ID Tag bar codes as well as quality of address in the address block. Are bar codes smudged or out of tolerance? Correct problems as noted.	1	9			Т		
DIOSS OPM: SORTING STACKERS	11.	Every two hours check for missorts. Take a sample from at least 5 stackers and verify the address block matches the scheme for that pocket. Verify mail pieces enter stacker in a uniform manner. Document any problems found and if needed write a work order.	2	9			Т		
DIOSS OPM: OVERFLOW STACKER	12.	Every two hours check mail in the Overflow/Reject Stacker. Check type of mail present in overflow stacker to determine which area(s) of the machine might be malfunctioning. Check for indications of double feeds, one particular code, a single gate, or mail path blockage problem. Document any problems found, and if needed write a work order.	2	9			Т

DIOSS OPM: ACE/MKAT LAPTOP COMPUTER		Every 2 hours check all performance indicators displayed on the MPEWatch Realtime Maintenance View Screen, including the following items:	5	9			Т
		Key Performance Indicators (KPI) report.					
		NOTE					
		Access to KPI can be done by clicking on the hyperlink located in the column titled "KPI%".					
		2. Unplanned Events.					
		3. DPS Information.					
		 Take appropriate action to investigate and correct any abnormalities detected in viewing MPEWatch. Generate a work order for further maintenance actions if required. 					
DIOSS OPM: ADMINISTRATIVE		At the end of the operation, compile the following information:	2	9			Т
		Interim reports taken during the operational run with any abnormalities noted and/or highlighted.					
		2. Route sheet information.					
		Any work orders generated.					
		Make entries in Machine Logbook of any discrepancies found during the mail run.					
		5. Turn this information into Maintenance Supervision. Brief personnel coming on duty.
